

HOW TO BUY BITCAR TOKENS WITH CRYPTOCURRENCY

1

READ OUR TOKEN PAPER

To understand all details about the upcoming Token Generation Event, access the Token Paper [HERE](#).

2

PREPARE YOUR ETHEREUM WALLET

BitCar will ask you to provide a Public Ethereum Address, using a wallet that is ERC20 compliant, to receive your ERC20 BITCAR tokens. You must have access to the private keys of your Ethereum Address. Do NOT provide an exchange address or your tokens will be permanently lost.

Here are some examples of currently compliant ERC20 Wallets:

- » MyEtherWallet
- » IMToken
- » MIST
- » XETH

3

GET YOUR COINS READY

BitCar accepts Bitcoin, Litecoin and Ethereum. You can send these from any wallet — as long as you make sure the wallet you provide to receive your BITCAR tokens is ERC20 compliant and you control the private keys.

4

READY TO BUY TOKENS?

Go to [bitcar.io](#) and click on the 'Buy Tokens' button. You will be forwarded to our Token Sale Page to start the process.

5

PRE-READ THE INCLUDED INSTRUCTIONS

Before filling out the Token Sale Page form, please read the step-by-step instructions provided to avoid any mistakes. If the information you provide is wrong, or a non-ERC20 compliant Ethereum Wallet Address is provided, your tokens will be lost.

6

PURCHASE TOKENS

Transfer BTC, LTC or ETH to the wallet address provided. You can do this from any wallet.

To avoid your transaction from being stuck in the network for a prolonged period, ensure you use more than the minimum required transaction fee.

7

CHECK YOUR BITCAR ALLOCATION

Once your payment is confirmed, the Status Box will display 'Payment Received'. You can then click 'Check Token Allocation' on our Token Sale Page to check your tokens (as a confirmation email is not issued).
